

“Audiopipe loudspeaker frenzy”

If you have been looking for a high fidelity concert quality sound, Audiopipe APMB stock has been fully replenished again. For those who don't know the APMB's, they are a complete family of loudspeakers created for the sole purpose of handling high levels of RMS power and reproducing screech less mid's and hi's. First born was the APMB-6ND, weighting in just under 3 lbs with a 1.5 TIL voice coil surrounded by a neodymium magnet and a ALIM mounting depth of 2.4" can with hold power levels of up to 250 watts max power. Next to follow are the APMB-6 and the APMB-8 which follow similar guidelines but with a more conventional magnet style. With its unsurpassed quality and competitive pricing stock levels are slowly being depleted. Last reported, 10's, 12's and 15's are in the works. Contact Audiopipe 1-877-audiopipe.
